

May 2026 Team Plan

Phase 2: Contact Intelligence | Emmanuel, Jeremiah, Abdulazeez

Central Goal

Turn a flat contact list into a ranked, intelligence-backed prospect pipeline. Every contact enriched in May has a wealth score, a career archetype, at least one financial signal, and a warm introduction path. Fundraiser prep time drops from 30 minutes per contact to under 5.

Week 1 — Stabilise & Ship (May 5-9)

Get the live pipeline running clean and validate what is already built.

Emmanuel

- Restart server + resume Job 2 enrichment run

All code fixes are in. Restart via run_py312.bat, resume Job 2, monitor first 3 batches. Target: under 5% failure rate.

- Backfill news signals on all completed batches

Run python scripts/backfill_news_signals.py for every completed batch. Confirm press_count is in Airtable.

Jeremiah

- Secure Crunchbase Pro API key

Sign up, run a test call against a known contact, confirm the /entities/people endpoint returns investment and exit data.

- Confirm Arkham Intelligence API access

Apply for Arkham or confirm Nansen as fallback. If neither accessible by May 9, escalate immediately — this blocks Week 3.

Abdulazeez

- QA 20 enriched records — validate trajectory and post signals

Pick 20 contacts from the completed batch. Check trajectory_tag matches career history. Log misclassifications in a shared doc.

- Audit CRM for contact_type field + crypto contact count

Check if contact_type exists in Airtable. Add it if missing. Count crypto-tagged contacts — this scopes Week 3 onchain work.

Week 2 — Financial Signals (May 12-16)

Add Crunchbase as a second financial data source and ship the first composite wealth score.

Emmanuel

- Define and document wealth scoring weights

Write the scoring rubric before the scorer is built. Assign weights per signal (e.g. EXITED_FOUNDER = +30, Crunchbase exit = +25). Share by May 13.

- Mid-week Crunchbase review and unblock

Check in with Jeremiah on May 14. Review field output on 5 test contacts. Sign off before it goes into the pipeline.

Jeremiah

- Build crunchbase_client.py and parse 5 CRM fields

Wrap the Crunchbase Pro API, resolve person entities from URLs. Parse: total_investments, notable_exits, portfolio_companies, co_investors, recent_funding_activity. Nulls must not crash the pipeline.

- Wire Crunchbase into BatchExecutor and add Airtable fields

Integrate as a parallel gather call. Create the 5 fields in Airtable via script. Test on 20 contacts and confirm hit rate.

Abdulazeez

- Build wealth_scorer.py — composite confidence score

Aggregate all signals into wealth_confidence (High / Medium / Low) using the weights Emmanuel defines. Output a signal_trail JSON showing what contributed.

- Add wealth_confidence and signal_trail to Airtable and wire into pipeline

Create both fields via script. Wire scorer as the final step in _process_record. Confirm populated on 10 test contacts.

Week 3 — Deep Wealth (May 19-23)

Add onchain wealth verification for crypto-native contacts.

Emmanuel

- Collect all 3 Sales Navigator exports

All team members export their LinkedIn connections as CSV before May 21. Week 4 is fully blocked without these files.

- Validate wealth scoring output against known HNW contacts

Pick 10 contacts you know are high net worth. Check scorer assigned them High confidence. Document any gaps for calibration.

Jeremiah

- Build arkham_client.py — entity search and wallet resolution

Take name and company, return a wallet address with confidence score. Low-confidence matches must not auto-write to the CRM.

- Build holdings aggregator and conditional execution gate

Fetch token balances, convert to USD. Gate fires only when contact_type is crypto. Test on 10 known crypto contacts. Wire 4 onchain fields to Airtable.

Abdulazeez

- Update wealth scorer to include onchain signals

Extend wealth_scorer.py so a confirmed wallet balance above threshold pushes a contact to High confidence regardless of other signals.

- Full scoring QA on 15 contacts across all types

Run the full pipeline on tech founders, finance execs, and crypto-native contacts. Document any scoring anomalies.

Week 4 — Network Intelligence (May 26-31)

Build warm path mapping — turn team LinkedIn networks into ranked introduction routes for every prospect.

Emmanuel

- Build network_mapper.py — team graph and prospect adjacency

Parse and deduplicate the 3 Sales Navigator exports. For each CRM prospect, find which team member is connected and at what depth.

- Lead Phase 1 retrospective and draft Phase 2 scope

Run a team retro on signal usefulness and calibration. Draft the Phase 2 outreach automation scope for June.

Jeremiah

- Support network graph deduplication

Three exports will have overlapping connections. Build the deduplication pass that merges duplicate profiles into single nodes in the team graph.

- Document Sales Navigator refresh cadence

Write the standing operating procedure: how often to re-export (weekly), how to run the refresh, what changes between runs.

Abdulazeez

- Build intro strength scoring

Score each prospect-team connection by recency, shared interactions, and mutual connections. Distinguishes a genuine warm intro from a name-only connection.

- Wire warm path fields into Airtable and validate

Add mutual_connections, top_introducer, intro_strength_score to Airtable. Test against 5 known real warm paths in the existing network.

May 2026 KPIs

Goals

Build and deploy a full contact intelligence pipeline that enriches every prospect with career, financial, and behavioural signals automatically.

- Job 2 completes all 37 batches with under 5% failure rate after retries.
- 80% or more of contacts have at least 3 intelligence fields populated by month end.
- All 7 enrichment signals live in production by May 31: trajectory, news, posts, Crunchbase, onchain, warm path, and wealth score.

Integrate all enriched signals directly into Airtable CRM so the fundraising team can act on intelligence without leaving their existing workflow.

- wealth_confidence field assigned to 100% of enriched contacts by end of Week 2.
- press_count populated for 60% or more of enriched contacts.
- Warm path fields visible in Airtable for 30% or more of the prospect list.

Improve pipeline reliability and data accuracy so enrichment results can be trusted as a basis for fundraising decisions.

- trajectory_tag misclassification rate below 10% on a spot-check of 20 records.
- Onchain wealth estimates within 15% of public wallet trackers. Zero false matches written to CRM without human review.
- Crunchbase hit rate of 40% or more on contacts with a known Crunchbase URL.

Build a relationship intelligence system that consolidates contacts across platforms, maps them into a network graph, and surfaces automated warm introduction recommendations.

- Warm introduction path found for 30% or more of CRM contacts.

- Fundraiser contact prep time drops from 30 minutes to under 5 minutes, validated by a live review of the top 10 prospects before May 31.
